Pham Van Toi (Tom Pham)

Fullstack Engineer · PHP (Laravel, Drupal, Yii) · Node.js · Vue.js · SQL Server / MySQL · Microsoft Azure

Ho Chi Minh City, Vietnam · tomiot8485@gmail.com

Profile

Fullstack engineer with 7+ years building web applications for enterprise clients in the UK, Japan and China. Strongest on the back end: PHP (Laravel, Drupal, Yii, CodeIgniter) and Node.js, with REST APIs on SQL Server and MySQL. Comfortable on the front end with Vue.js (2 and 3) and TypeScript.

At Li & Fung I modernise a large enterprise workflow platform: upgraded it to PHP 8.2, moved its databases to Azure, optimised performance, fixed penetration-test findings and built an automated suite of 1,000+ test cases. I also run AI coding agents in the team's delivery process. I work in English every day, in Agile/Scrum with Jira.

Technical skills

Area	Skills
Back end	PHP (Laravel 5–12, Yii, CodeIgniter 4, Drupal 7, EC-CUBE 4), Node.js (Express, TypeScript), Python (Flask, FastAPI)
Front end	Vue.js, TypeScript, JavaScript, jQuery, HTML, CSS
Databases	Microsoft SQL Server, MySQL, PostgreSQL; stored procedures, query optimisation, Azure Database for MySQL, Azure SQL; Eloquent and Sequelize ORMs
Cloud and DevOps	Microsoft Azure (App Service, API Management, Logic Apps), Docker, Kubernetes (Azure Kubernetes Service, Helm), CI/CD (Azure Pipelines), Linux (CentOS, Ubuntu), Bitbucket workflow

Area	Skills
APIs and integration	REST API development and design (Laravel, Express, Yii), request validation (Zod), rate limiting, token and session authentication, Microsoft Graph API, LDAP / Azure AD single sign-on, AI API integration (Azure OpenAI)
Testing and quality	PHPUnit, Jest, Mocha/Chai, Playwright, Selenium, code review; secure coding (XSS, access control); DRY refactoring; Strategy and Factory patterns, Laravel Facades
AI and automation	AI coding agents (GitHub Copilot, OpenAI Codex, Claude Code), n8n workflows
Tools and process	Git (GitHub, GitLab, Bitbucket), Jira, Redmine, Agile/Scrum

Work experience

Software Engineer — Li & Fung

April 2024 – present · Ho Chi Minh City

Build and maintain the group's internal workflow platform and staff apps: approvals, leave, expense and travel claims, car booking and business card orders. Stack: Drupal 7, Laravel REST API, Yii 1.1, MySQL and SQL Server on Microsoft Azure.

- **Platform upgrade:** upgraded Drupal 7.75 to 7.103 and PHP 7.2 to 8.2. Fixed PHP 8 fatal errors and warnings across dozens of custom modules and database-stored pages without changing behaviour for users.
- **API development:** built and maintained REST APIs for three systems: the Laravel API behind the workflow platform (fixed its Laravel 12 rebuild: CSRF, model mapping, cached configuration), the OneTouch staff app API (Yii, PHP 8.2, token authentication) and the news portal's Express API (TypeScript, Zod validation, rate limiting).
- **Performance:** cut the approvals page from ~87 to ~17 database queries per load, and its data refresh from about 3 minutes to about 20-30 seconds by running web-service calls in parallel.
- **Cloud migration:** moved the MySQL databases to Azure Database for MySQL Flexible Server, with per-environment accounts.

- **Security:** fixed penetration-test findings: cross-site scripting (XSS), sensitive data exposed by PHP endpoints, and unauthorised access. Hardened the HTML sanitiser to block obfuscated script payloads.
- **Testing:** built automated PHPUnit tests for the Drupal modules and the Laravel API, plus Playwright smoke tests; the Drupal suite passes on PHP 7.4 and 8.2.
- **Market News AI portal:** built most of the news-feed back end (Express, TypeScript, Sequelize on Azure SQL): Bing and Google News search through a Strategy/Factory design, and AI article summaries with Azure OpenAI through Azure API Management. Wrote Jest tests.
- **n8n automation platform:** deployed n8n on Azure Kubernetes Service with custom Docker images, Helm charts and Azure Pipelines for build and deploy.
- **Integrations:** Azure App Service, Logic Apps and Microsoft Graph API.
- **AI-assisted delivery:** designed six scheduled AI coding agents that take labelled Jira tickets from analysis to a reviewed pull request, with human approval before merge.

Software Engineer — Nashtech

March 2022 – April 2024

Built a web platform for a UK company to manage vendor committees.

- Developed features end to end with Laravel, Vue.js and MySQL.
- Wrote PHPUnit tests and fixed defects found in testing and production.
- Worked in Agile sprints with the UK team, tracking work in Jira and Azure DevOps.

Software Engineer — ShinWay Software Development

July 2019 – February 2022

Delivered outsourced web applications and e-commerce sites for Japanese clients.

- Built and maintained projects in Laravel, Yii, CodeIgniter and EC-CUBE, with Vue.js front ends.
- Designed schemas and queries in MySQL and PostgreSQL.
- Set up and managed CentOS 7 VPS servers for deployment.

Education and languages

- **Bachelor of Information Technology** — Ho Chi Minh City University of Technology and Education, 2015 – 2019
- **Languages:** English (professional working), Vietnamese (native)
